SUMMARY

Computer Science undergraduate with hands-on experience in Python, OpenCV, YOLOv5, computer vision, image processing, object detection, and machine learning applications. Developed computer vision systems for face recognition and object detection, along with full-stack applications involving real-time processing, geospatial mapping, and REST APIs. Strong foundation in Python programming, data structures, algorithms, image analysis, and problem solving with experience building practical AI-driven applications.

EDUCATION

VIT Bhopal University B.Tech. in Computer Science and Engineering	Sep 2023 – Present CGPA: 8.26/10.0
---	--

Class XII – TSBIE Percentage: 94.2%	2023
--	------

Class X – CBSE Percentage: 83%	2021
---	------

SKILLS

Programming Languages: Python

Computer Vision & AI: OpenCV, YOLOv5, Object Detection, Face Recognition, Image Processing, Computer Vision

Frameworks & Libraries: React.js, FastAPI, Flask, Socket.io

Technologies: REST APIs, WebRTC, Google Maps JavaScript API, Geospatial Mapping, JWT Authentication

Databases & Tools: MySQL, Git, GitHub, Vite, VS Code

PROJECTS

Face Recognition-Based Attendance System	<i>Python, Flask, OpenCV</i>
---	------------------------------

<https://github.com/pranavchinnawar/Face-Recognition-Attendance-System>

- Developed a computer vision-based attendance management system using Python, Flask, and OpenCV to automate student identification and attendance tracking.
- Implemented real-time face detection and face recognition using OpenCV to identify registered students and automatically record attendance.
- Developed student registration and management functionality with teacher and administrator controls for maintaining attendance records.
- Generated structured attendance reports and notifications, reducing manual attendance processes and improving accessibility of attendance data.

GeoMeasure – Geospatial Land Measurement Platform	<i>React.js, FastAPI, MySQL, Google Maps API</i>
--	--

github.com/pranavchinnawar/GeoMeasure	geo-measure-gamma.vercel.app
---	---

- Developed a full-stack geospatial application using React.js, FastAPI, MySQL, and Google Maps JavaScript API for real-world land area, perimeter, and distance measurement.
- Implemented interactive polygon and polyline processing with GPS coordinates, draggable vertices, boundary detection, and real-time geospatial calculations.
- Implemented WGS-84 geodesic area calculations and Haversine distance calculations with support for multiple area and distance measurement units.
- Developed JWT authentication, REST API-based CRUD operations, and DOCX report generation containing satellite imagery, GPS coordinates, measurement summaries, and survey metadata.

Ghost Protocol – Anonymous Real-Time Chat Platform	<i>React.js, Node.js, Express.js, Socket.io, WebRTC</i>
---	---

github.com/pranavchinnawar/Ghost-Protocol	ghost-protocol-khaki.vercel.app
---	---

- Developed a real-time web application using React.js, Node.js, Express.js, and Socket.io for anonymous peer-to-peer communication.
- Implemented real-time matchmaking, messaging, typing indicators, emoji reactions, image sharing, and temporary voice notes.
- Integrated WebRTC peer-to-peer communication to enable real-time voice calls between randomly matched users.
- Implemented temporary chat rooms with automatic session cleanup and deployed the frontend and backend using Vercel and Render.
